

## CCTV-Camera Realtime Monitoring and Sharing System

Achieve the accurate information sharing of the rivers and road conditions, facilities situation by collecting and delivery of high-definition video.

### Hazard

Earthquake Tsunami Land Slide Cyclone Storm Surge Flood Drought Volcano Wild Fire Tornado Heat Wave Cold Wave Avalanche

### Solution Purpose

Prevention & Mitigation Preparedness Response Recovery

## Solution Theme

Risk Assessment Infrastructure Technology Information & Communication Technology Evaluation

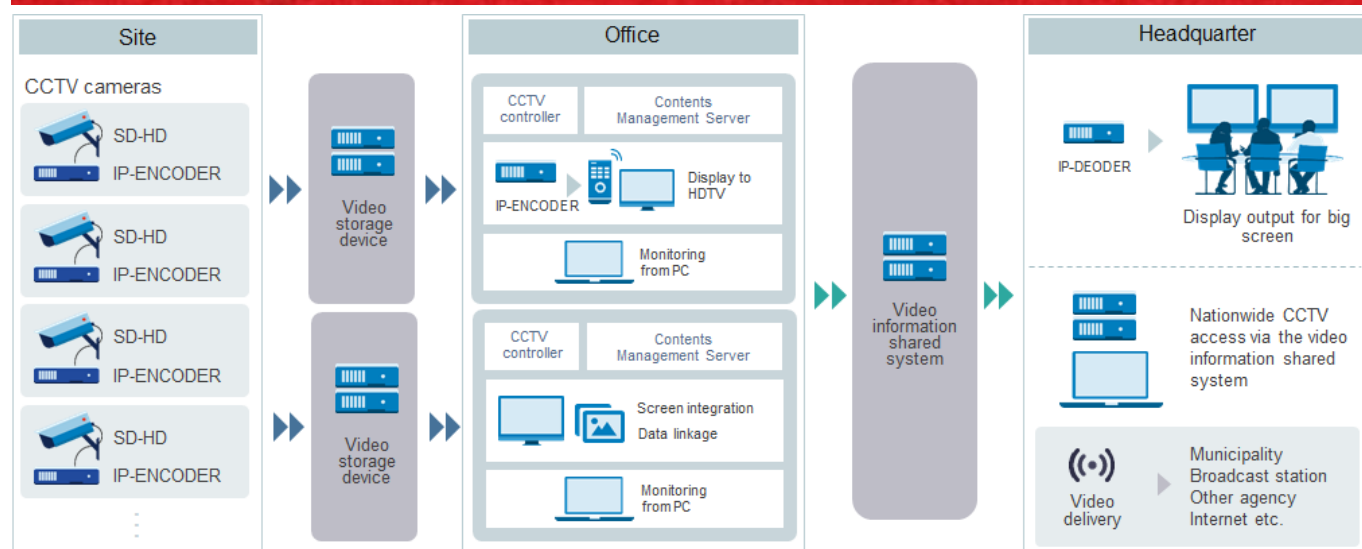

## Technology Subject

Hazard Identification River & Basin Dam & Reservoir Coast Sabo Road Railways Airport Port Essential Utilities Urban Information Gathering Information Communication Information Platform Post Disaster Evaluation

## Advantages

This system is available to monitor CCTV-camera video data on the PC. (Viewers only need PC) Users can choose a camera from tens of thousands of CCTV-camera (installed throughout Japan) on a map or a list. This system adopts MPEG2 and H.264 technology to reduce the load of communication on a network and to ensure the quality of an image.

## Solution Illustrated

## Background

Information sharing is very important for disaster response (initial response, rescue and restoration activities). In addition to numerical data (water level, rain fall), visual data is needed to share damage situation and make decision.

## Exposition of the Solution

This system shows images/pictures from over several tens of thousand cameras in all over Japan in real time. Images could be chosen from maps/lists. In normal daily operations, it would be used as supporting tool for inspections. For emergency situations, this system offer/tell site.

## Achievements of Examples

MLIT (Ministry of Land, Infrastructure, Transport and Tourism), Prefecture
